

# PRO PLUS®

## PRO PLUS®

### BIG, TOUGH AND BUILT TO LAST

Since its introduction, the PRO PLUS® has been a best seller for WESTERN®. Contractors continue to be impressed with its strength and rugged construction. Designed for heavy-duty commercial and light municipal applications, the 7 1/2', 8', 8 1/2' and 9' PRO PLUS line fits a wide range of vehicles, from 3/4-ton to F-550-size trucks.

#### POWER BAR

The industry-first, optimum-strength POWER BAR provides exceptional torsional strength and rigidity to eliminate the blade twisting that's often seen in severe use.

#### SHOCK ABSORBERS

Two standard shock absorbers soften blade trip return.

#### TUBULAR QUADRANT

The high-strength heavy-duty tubular quadrant is built to withstand season after season of commercial use.

#### PIVOT POINT

PRO PLUS has a massive pivot point with a 1" diameter pivot bolt to ease nose plate stress.

#### A-FRAME CONSTRUCTION

The 3" square tubing provides increased strength.

#### HIGH-STRENGTH STEEL BASE CHANNEL

The high-strength steel base channel provides extra support where it's needed most.

#### CUTTING EDGE

Standard 1/2" x 6" high carbon steel cutting edge.

#### OPTIONAL BACK DRAG EDGE

The back drag edge makes clearing snow away from doors and other tight areas easy.

#### OPTIONAL BLADE WINGS INCREASE EFFICIENCY

Blade wings have been a huge hit with contractors. They allow scooping, add carrying capacity and reduce trail-off. They utilize a single pin for quick attach/detach. Additional options include deflectors and curb guards. Shoe Kits are standard.
